Keypoints

1. SQL allows you to rename a database using the RENAME DATABASE statement.

2. The RENAME DATABASE statement requires the ALTER DATABASE privilege.

3. The syntax for renaming a database is: RENAME DATABASE current_name TO new_name;

4. Make sure to use the correct database name in the RENAME DATABASE statement.

5. Renaming a database does not affect the data or the objects within the database.

6. It is important to update any references to the old database name in your application code or scripts after renaming the database.

7. Take caution when renaming a database as it may impact other applications or systems that rely on the database name.
